

Trustwave Endpoint Protection Suite 3.18.02 Release Notes

February 2018

This document applies to Trustwave Endpoint Protection version 3.18.02 endpoints.

Updated Features

The following features are updated in Trustwave Endpoint Protection:

- Notification messages displayed by Trustwave AV have been simplified. Full details are still logged.
- With Mobile Security on Android devices, malware counts displayed were not updated immediately if a scan started in the background. Fixed.
- With Mobile Security on Android devices, the “Fix this for me” button for password policy no longer forces a password policy on the device.

Known Issues

The following issues are known to occur in Trustwave Endpoint Protection. If you encounter any of these issues, contact Trustwave Support for assistance.

- Trustwave AV (3.18.01 and above) on supported Windows endpoints is compatible with the Microsoft security update for the “Meltdown” vulnerability, and sets the Registry entry required.
- Windows XP endpoints are no longer supported (as of Jan 1, 2018).
- If an endpoint has Unicode characters in its FIM-monitored filenames, paths, registry keys, or registry values then FIM will not generate a message related to those names, paths, keys or values.
- A label on Endpoint Protection’s local interface is not updated to “Endpoint information”.

System Requirements

Trustwave Endpoint Protection is supported on all Microsoft Windows operating system families (32-bit and 64-bit) currently covered by Microsoft Support, except Windows XP based Microsoft OS platforms. Trustwave Endpoint Protection is also supported on current versions of CentOS, RedHat Linux, Debian, and Ubuntu (32-bit and 64-bit). Trustwave Endpoint Protection is also supported on macOS El Capitan (10.11), Sierra (10.12), and High Sierra (10.13). Contact Trustwave Support for more specifics.

TrustOS and Windows CE are not supported at this time.
