R3000 3.0.10

M86 Security release of R3000 software version 3.0.10 requires an R3000 or R3000IR appliance running software version 3.0.00 or later.

ABOUT M86 SECURITY

M86 Security is a global provider of Web and messaging security products, delivering comprehensive protection to more than 20,000 customers and 16 million users worldwide. As one of the largest independent Internet security companies, we have the expertise, product breadth and technology to protect organizations from both current and emerging threats. Our appliance, software and cloud-based solutions leverage real-time threat data to proactively secure customers' networks from malware and spam; protect their sensitive information, and maintain employee productivity. The company is based in Orange, California with international headquarters in London and offices worldwide. For more information about M86 Security, please visit www.m86security.com.

SOFTWARE ENHANCEMENTS

The 3.0.10 software update corrects the following potential issues with your R3000:

- In environments with multiple R3000s sending logs to a single Enterprise Reporter, delays might be experienced during log file transfers to the Reporter. However, no data will be lost. The symptom of this problem occurs after applying the R3000 3.0.00 software update and subsequently email alerts from one or more R3000s are received, indicating that four or more shadow.log files are pending. If you have multiple R3000s sending log files to a single (or multiple) Reporter(s), we recommend that this software update be applied at the earliest convenience.
- An issue has been addressed in which the R3000 could potentially make an incorrect detection between the Active Directory Mixed and Native Mode.
- Support for 2048-bit certificates has been added.
- An issue has been addressed in which some Apple workstations are not logged off when using Tier 3 forced authentication.
- An issue has been addressed in which some URLs may not be merged into the library during updates.

In order to ensure your R3000 has optimal functionality, M86 Security strongly recommends that you install this update at your earliest convenience.

NOTE: We recommend applying this software update during periods of low network usage, as it will have a severe impact on the server resulting in a decreased filtering performance for approximately five minutes.
