

WHAT'S NEW IN THE 8E6 THREAT ANALYSIS REPORTER

TAR SOFTWARE VERSION 1.3.10

Marshal8e6 is pleased to announce the release of TAR software version 1.3.10. This software release requires a Threat Analysis Reporter appliance running software version 1.3.10 or later.

WARNING: The 1.3.00 software update must be applied before applying this update.

The 1.3.10 software release includes the following updates:

- **Improved error handling** - In rare events, when information is received from the filter in an unexpected log format, the newly improved error handling function resolves the problem automatically without causing any of its components to restart.
- **Enhanced "Sync All Devices" feature** - In rare circumstances, should the administrator need to change the TAR unit's IP address, when clicking "Sync All Devices" the new IP address for the TAR unit will be updated on the R3000 that is linked to the TAR unit.
