

What's New in the R3000 '2.0.00' Version of the Mobile Client

R3000 software version 2.0.00 contains the latest release of the 8e6 Mobile Client (the previous version being 1.8.20). Software version 2.0.00 requires an R3000 Enterprise Filter unit running software version 1.10.30 or later.

Enhancements and New Features

- **8e6 Mobile Client Windows Deployment Kit** – This new package replaces the Web site previously accessed for configuring and distributing the Mobile Client, and includes the following:
 - Unconfigured packages containing the Mobile Client software for Windows and Macintosh OS X
 - A tool for setting or modifying the configuration of the Mobile Client packages
 - An .msi package that can be assigned via Group Policy to workstations to remove a previously-installed Mobile Client package
 - Online help for configuring, deploying, and removing the Mobile Client

See the [What's New in the R3000 '2.0.00' Version](#) release notes for information on new features in the R3000 interface regarding the Mobile Client feature.
